User Story For APP

BurNing and XB are a devoted American couple, and they have a lovely girl named Sylar. One day, XB and BurNing decide to relax outside and travel to somewhere in summer vacation, but they do not have a specific destination now. So they call their daughter Sylar by phone to ask for some recommendations. However, Sylar is at a meeting now, so she suggests them to use an APP to help them with their travel plan. And she will go home in one hour.

Therefore, XB download the APP and tried to plan their travel with it.
After clicking the APP, the first page shows up with two buttons: "*Sign*" In and "*Skip*". Because it is his first time to use this APP, he chooses "*Skip*".

And then on the second page, there are a button "*Go*" and two blanks named "*Destination*" and "*Date*". They want to go somewhere far this time, so he fills Beijing as destination and 08/08/2015 as date in the blanks, then clicks the button *Go*.

And on the top of the third page, the title is their destination Beijing and there is a bar shows the weather in Beijing at 08/08/2015 below the title. In the middle of the page, there are some buttons named with some famous scenic spots in Beijing such like "*the Great Wall*", "*the Summer Palace*", and "*the Temple of Heaven*". And there is a blank named "*Input your destination*", and a button "*Go*" besides it, at the bottom of the page. XB clicks the spot "*the grate wall*".

Then the fourth page shows up. The top part of this page is the same with the previous page, only adds a "*the grate wall*" besides Beijing and a new button named "Add To My Schedule". As for the middle part, there is a bar shows the "*Stars*" of this scenic spot: "*5*". And there are also some columns named with: "*Hotel*", "*Bus Station*", "*Restaurant*" and "*Hospital*". And in each column, there are some optional buttons named with the specific name of the topic. For example there are "*Quanjude Roast Duck*", "*Dong Lai Shun*" and "*Hai Wan Ju*" buttons in column "*Restaurant*". And at the bottom part of the page, there is a button named "Nearby Spots". XB then clicks on the button "*Hai Wan Ju*" because he has long wanted to have a try there.

Then it turns into the fifth page. The whole page is the information about "*Hai Wan Ju*", and there is a button named with "*Add To My Schedule*" at bottom. He clicks on it, but another page with title "*Sign In*" pops up. XB gets kind of confused now because he has never sign up on this APP before.

When he considers about whether he has to sign up an account and sign in, his daughter Sylar arrive home. XB explains the situation to Sylar and asks her what to do now, Sylar says: "Do not worry Dad, I have already had an account, you can use my account to schedule our travel."

Then Sylar signs in with her id and password is the "*Sign In*" page. Then she add "Hai

Wan Ju" to their schedule, as well as some other items for instance *"Shangri-La"* in column *"Hotel"*. Then she also add *"the grate wall"* to schedule.

After this, XB says they may go to some other spots near the Great Wall, so Sylar clicks on "Nearby". And another page shows up with some buttons of nearby spots. They add some other spots and restaurants in the same way with before.

At this time, BurNing receives a phone call that there is a problem with her Visa to China, and she can not go China in August. XB and BurNing became very disappointed immediately, because it seems they have to change their schedule to another location for their travel.

Sylar feels their feelings, and says: "Maybe you can travel to Egypt, is also a ancient civilization country, I travel there last summer, is a great trip. And you can just follow my schedule at that time if you want". "Really? Do you remember your schedule last year clearly?" BurNing asks. "Definitely", Sylar says. Then she explains to them some other functions of this APP.

Sylar tells them that if a user signs up an account with some basic information and uses this APP to plan a travel, the system could save their travel records. The user himself could review his travel records at anytime. And the APP could use the whole users' records to sum up some features for popular spots, such as hottest spots, hottest restaurants and hotels. Then the APP will come up with a recommendation page with those hottest items, on which users could get them directly.

In this way, XB and BurNing get the travel records of Sylar and decide to follow her schedule. And they also find a very popular scenic spot in Africa "Maasai Mara National Reserve" from the recommendation page. They plan to travel there after the trip in Egypt. And their schedule is done now.

Finally they exit the APP and go to dinner together happily.

Hope they have a great trip at Egypt.
